

April 16, 2021	Mite fighting strategy discovered	
Overview	Notes	
<p>Watch this video from Wildflower Bee Farm: https://youtu.be/pHKphUb1a3k</p> <p>While watching: Observe the way the bees are entering the hive. Why are they sliding through the upper opening? Are they protecting themselves from mites? How else do bees protect themselves? What are things we do at our homes to protect ourselves?</p> <p>Have you ever done something to improve or upgrade your safety or livelihood? Found a shorter path on your walk home from school? Found a better way to put away the dishes?</p> <p>List some things that you adapted to or manipulated to improve or better yourself and others around you. These habit changes could also be incorporated into positivity in your actions and the things you say.</p> <p>Today's goal: To understand the importance of bees protecting themselves and how they adapt to improve!</p> <p>Further research on bees protecting themselves: https://askbiologist.asu.edu/plosable/shimmery-defense</p>
